GO ANYWHERE®
Managed File Transfer

Modules for Licensing

GoAnywhere is a robust and complete managed file transfer solution. Modules are available that can satisfy a wide array of file transfer requirements. Fortunately, you can choose to license and pay for only the modules you currently need and easily 'unlock' additional modules, if necessary, later. Here are the modules that can be licensed:

Advanced Workflows* - is used when you are initiating the transfer (push/pull), if PGP encryption/decryption is needed, if data needs to be pulled from and/or uploaded to a database and/or additional actions in a transfer are called before/after a file exchange.

SFTP Server* - server side of an SFTP transfer. Your partner connects to you via SFTP and initiates the transfer.

FTPS Server* - server side of a FTPS transfer. Your partner connects to you via FTPS and initiates the transfer.

Secure Folders* - allows web users to connect to your HTTPS server via a browser.

AS2 Send/Receive* - secure protocol mostly used by retail and manufacturing customers, especially those that exchange files with Walmart. AS2 is licensed at one, five (included in Premium & Ultimate bundles) or unlimited partners. GoAnywhere is Drummond Certified, which is required by many businesses that exchange via AS2.

Security Domains* - every license includes 2 domains. Domains are useful if you want to manage file transfers and associated users in their own domain (by department for example).

Secure Mail* - is used if you want to send files via email securely and/or if you want to send large files via Outlook or the web email client as there are no file size limitations when sending files via Secure Mail. Using the web email client, you can also send an email requesting files.

Advanced Reporting* - includes over two dozen useful activity and setting reports and the ability to create custom reports via an Advanced Workflows Task.

GoDrive* - is used for file syncing, sharing and collaboration. It's similar to cloud file sharing products, except GoDrive can be on premises or in the cloud and it is licensed perpetually instead of per user, per month (substantial savings). The first 10 users are free as well as unlimited 'view only' users.

Secure Forms* - *(requires Advanced Workflows)* - allows end-users to fill out custom forms with one or more input values and optionally upload files through the HTTPS Web Client in GoAnywhere. When a form is submitted, an Advanced Workflows Project is executed to automatically process the submitted values and files.

Agents - *(requires Advanced Workflows)* - provide automated file transfers and workflows on systems throughout the enterprise. Agents can be installed on almost any server or workstation where file transfers or workflows need to be performed. These systems can reside on-premise or in a cloud infrastructure such as Amazon EC2 or Microsoft Azure. Two Agent tiers are available, Standard and Advanced. Standard Agents provide folder monitors, local file system tasks, the ability to run local commands, compression, PGP encryption, ETL and database tasks. Advanced Agents include all the above features of a Standard Agent plus SFTP client, SCP, send/retrieve email, and execute SSH commands. One Standard Agent is provided for free with every Advanced Workflows license.

Modules for Licensing (continued)

GoAnywhere Gateway* - is a separate product and must be downloaded on its own. It is normally used if you licensed the server side of the transfer (SFTP, FTPS, Secure Folders, FTP) but it can also be used for outbound connections too. It's an enhanced reverse proxy that resides out in the DMZ routing server requests without having any ports open into the network. It can also load balance/cluster the file servers.

FTP Client & Server* - *FREE* - If you're exchanging files that don't contain sensitive information and don't need a secure method of transferring files, then FTP can be licensed at no cost.

*The GoAnywhere Premium bundle includes these modules and represents an approximate 10% discount versus purchasing separately.

The GoAnywhere Ultimate bundle includes 2 clustered licenses of GoAnywhere Premium. Ultimate pricing represents an approximate 20% discount versus purchasing separately.

Even though a second license of Gateway is not required to cluster, a second license is included at no cost so a passive backup license will be available if needed or if a 3rd party load balancer is used in front of the two Gateway servers.
